Welcome to simple communication with Care-Talk™

Care-Talk™ is a wireless headset system specifically designed for hospitals. Physicians, cath/EP managers, interventional radiologists and other healthcare professionals across the country have already discovered the benefits of easy, clear and effortless, real-time communication with their staff members. You no longer need to raise your voice to be heard; every team member will hear you loud and clear.

Whether you need to talk to technicians, students or support staff, you can provide quick and accurate information without disrupting the procedure. With Care-Talk™, your staff works in a calm, well-organized environment and benefits from clear, up-to-the-minute, bidirectional instructions and feedback.

And the best part? Care-Talk™ features a simple 'plug-and-play' setup and takes just five minutes to get up and running.

"Before Care-Talk™, there were frequent miscommunications between our control room and the procedure room. We had to shout over the room's loud noises. Now, all personnel are aware of what is going on, and my staff is fully engaged and less likely to be distracted. I'd recommend Care-Talk™ because it creates a quieter, more professional atmosphere. "

Charles A. Bush, MDMedical Director

How CareTalk™ works

Care-Talk™ provides crystal clear audio through an audio mixer/distribution amplifier located in the control room, and comfortable, lightweight wireless headsets.

The wireless communication system works seamlessly through barrier walls, leaded glass and other partitions — with up to a 395-foot distance. Everyone in the control and procedure room can talk to one another in real time, with no feedback.

Headsets that make a clear difference

Early communication systems required awkward, heavy headsets with bulky belt packs. But the one-piece Care-Talk™ Comfort Headsets are lightweight, incredibly effective and color-coded for ease of use. No belts. No cords. Only clear, reliable communication.

The headsets are also equipped with a noise-canceling microphone that cancels out ambient room noise and an easy-to-adjust volume control/mute feature. Care-Talk comes standard with 4 wireless headsets and is expandable: up to 12 headsets per system; link systems together for up to 48.

A mixer/amplifier with a central base

The Care-Talk™ central base fits perfectly in any control room and manages your entire audio system via the audio mixer/distribution amplifier.

The front panel has individualized volume control for each headset, while an optional foot switch remotely controls the on/off function for the designated primary headset.

The bases of the headsets are mounted to a central base for an organized and convenient setup.

Care-Talk™ Stream

CareTalk™ stream takes the workflow a step further and includes connection to remote audiences around the world.

With CareTalk™ Stream, users can connect to clinical staff with collaborative team platforms such as Microsoft Teams, Zoom, and Cisco Webex.

Care-Talk™ benefits

- Allows the physician to take control of the procedure room
- Successfully installed in prestigious medical facilities and teaching hospitals across the U.S.
- Quick and easy installation without disrupting patient schedules
- Minimal staff training
- Clear, conversational, bidirectional communication with staff members
- Noise-canceling microphones to remove ambient noise
- Provides quick and accurate information to technicians, students and support staff without disrupting the procedure
- Works seamlessly through barrier walls, leaded glass and other partitions — up to 395 ft
- Lightweight, wireless headsets—no bulky belts or heavy, awkward headwear
- Music can be played through the system for the surgeon and staff
- Unit can be expanded to support up to 12 headsets per system; link systems together for up to 48

Care-Talk™ Options

- Microphone for the procedure room. If the physician chooses not to wear a headset, Care-Talk™ offers an optional microphone on the boom monitor.
- Amplified speaker for the procedure room. If the physician chooses not to wear a headset, Care-Talk™ offers an optional speaker for the procedure room.
- Foot switch for the mixer/amplifier in the control room. An optional foot switch can remotely control the on/off function for the designated, primary headset.

Care-Talk™ is a wireless intercom for staff communication. It is not a hearing device or a nurse-call system and is not intended for patient use.
